Julia Morgan, Architect

Synopsis

William Randolph Hearst's dazzling "castle" at San Simeon, California, is famous world round, yet only the aficionado can name Julia Morgan as the architect who built it. For more than thirty years she worked with Hearst in a rare collaboration, creating not only his art-filled hilltop palace but also a fairytale Bavarian "village" known as Wyntoon and many other commercial and domestic structures. Yet the Hearst commissions, notable as they are, are not Morgan's only claim to fame. Given the sweep of Morgan's accomplishments, it is astonishing that this is the first substantial book ever devoted to her career. Painstakingly researched for more than a decade by Sarah Holmes Boutelle, founder of the Julia Morgan Association, this handsome volume lovingly documents Morgan's life and work. This is a remarkable book celebrating the achievements of a remarkable woman.

Customer Reviews

This is an outstanding book on Morgan's life and work. Well written text, detailed history, biographical information, and quality photos of the many buildings are just a few of the book's strong points. Morgan designed hundreds of buildings during her over 50-year career, and the author deserves credit for covering so many of them. Of course, she is most famous for the projects she did for Hearst, such as the "Castle" and Wyntoon, the Austrian/Bavarian style estate near Mt. Shasta in northern California, but she created many other important buildings also, which get discussed in detail in this fine volume. Also included are scans of the original plans. Out of all the books on Morgan, this one is by far the best, and well worth your time and money. A little side note

here, I've done five different tours of the Hearst Castle over the years, so have had an opportunity personally to view one of her most important works. During one of the tours, the guide said that a few years ago they had a 6.4 magnitude earthquake there, but except for a few tiles that came off here and there, the castle sustained no damage. That's because despite the delicate looking surface ornamentation, underneath the building is steel reinforced concrete, with even thicker walls than necessary. As a result, the entire Hearst Castle sustained almost no damage during the quake, and no structural damage, and the only really dramatic thing that happened was the guide said that the quake shook things violently enough so that a lot of water sloshed out of the big Neptune pool. :-)

One of the guides said some interesting things about Hearst's wealth. By the standards of the time, he was certainly very wealthy, earning \$50,000 a day back in the early 30s.
